Summary

I am a back-end developer with 5+ years of experience working with edge technologies. I participated in many back-end projects these years using Laravel as my main framework and libraries like Livewire, Filament, etc. I follow the trends of the back-end world and keep myself updated with the latest tools. I love working in teams and creating magic in the world together.

Work Experience

- Technical Team Lead at Rasadent (2024 - now) (Full Time)

As a Technical Team Lead at Rasadent, I led the development of several key products, including Resadent Marketplace, a multi-vendor online e-commerce platform for dental equipment.. I also led the creation of ResaChortekeh, an accounting system tailored for dentists, enabling them to calculate treatment costs based on materials and consumables, so they can determine their profit margins.

In my role as Senior Backend Developer and Team Lead, I was responsible for the entire product lifecycle, from initial development to launch, working closely with my team. Our backend was built using PHP/Laravel, and we leveraged tools such as RabbitMQ and Elasticsearch. Project management was facilitated through Nibak, our in-house project management tool, and Git & GitHub was used for our source code management.

- Technical Manager at NeuroSurgery Association of SBUMS (2022-now) (Part Time)

For the past three years, I have served as the part-time Technical Manager at the Neurosurgery Association of Shahid Beheshti University. The association offers accredited training courses in neurosurgery, artificial intelligence in medicine, and research. These courses are conducted on the *Neurosurgery* platform, which I developed from the ground up using the Laravel framework, along with Livewire, TailwindCSS, and AlpineJS. The platform supports features such as online exams and certificate generation for participants. I have also collaborated with the association on writing articles related to artificial intelligence in medical science.

- CTO at 310 Agency (2023-2024) (Full Time)

As Chief Technology Officer at 310 Branding & Programming Agency, I managed a portfolio of projects. This included the Naji Foundation e-learning platform focused on medical sciences, the Melki Parts e-commerce platform for automotive performance parts, and Wabba Iran, a website for bodybuilding training and competitions.

- Backend Developer at Hital (2021-2022) (Part Time)

As a Backend Developer at Hital, I contributed to a range of projects, including Hamrah Felez, which is an online directory for the iron and steel industry, and Radio Bamik, an internet radio platform specializing in podcasts and audiobooks, etc.

- Freelancer (2019-2021)

Education

- Doctor of General Dentistry (DDS Candidate) - Tehran University of Medical Sciences, Tehran, Iran
- Diploma in Experimental Sciences - Allameh Helli High School for Gifted Students, Kerman, Iran

Projects

[Rasadent](#) - Dental Equipments Marketing Platform

Laravel - Elasticsearch - RabbitMQ - Redis
